

Mangosteen

Xanthone-Rich Cocktail or Tabs

Upon her first taste of the exotic fruit mangosteen, a gift from a faraway colony in the Malay Peninsula, Queen Victoria is said to have pronounced it the most delicious fruit on earth. It is in her honor that mangosteen has been called the “Queen of Fruits.” The fruit has long been treasured in the tropics of Southeast Asia and Indochina; it is now gaining worldwide fame for its wide-ranging health benefits.

Mangosteen is rich in xanthones, antioxidants that maintain immune system health. Xanthones are pan-systemic, which means the antioxidants aren't specific to one or two areas, but enrich and protect the entire body.

Source Naturals is pleased to provide you with MANGOSTEEN in both liquid and tab forms. It is a convenient source of beneficial nutrients and powerful antioxidants, a perfect addition to your wellness program.

Support Against 21st Century Toxins

Urban dwellers are bombarded daily with unclean air, impure water, and the numerous toxins inherent in the 21st century. It is strangely fitting, then, that support in dealing with the poisons of modern life would come from the opposite of urban modernity—the primeval, swampy jungles of Southeast Asia. Mangosteen has been used for centuries by the traditional health practitioners of India, Malaysia, Thailand, the Philippines, and Vietnam, but until recently, its fragility prevented wider cultivation or distribution to world markets.

The mangosteen grows only in lush, steamy jungles. The tree has long, waxy leaves, fleshy flowers, and a small red fruit, similar in appearance to a pomegranate. The purple-red rind encases snow-white, juicy fruit pieces that are segmented like an orange. The mangosteen fruit must ripen on the tree and doesn't last well nor keep long after being picked.

Xanthone-Rich Nutrients

MANGOSTEEN from Source Naturals has been formulated to provide you with a powerful blend of beneficial nutrients. Foremost in the drinks or tabs is the antioxidant xanthone. Mangosteen naturally contains 40 types of xanthones, such as mangostin, mangostenol, mangostenone A, trapezifolixanthone, and many more. Studies have shown that xanthones can strongly support healthy immune and cardiovascular systems by functioning as potent free-radical scavengers. Some xanthones have been shown to slow the activities of histamine and serotonin by acting as receptor blockers.

Source Naturals MANGOSTEEN delivers 28 mg of these high-potency antioxidants. The drink blend also includes Siberian eleuthero, astragalus, schizandra, and turmeric, all nutrients that further strengthen the immune system and increase the potency and wide-ranging benefits of the drink.

High ORAC Value

Mangosteen rind has been found to have the highest ORAC value (oxygen radical absorbance capacity) of all edible plants, far away more than the previous champion, prunes. It efficiently helps block oxidation reactions in the tissues and blood, oxidation that enables free radicals to attack cells.

Source Naturals is pleased to present you with MANGOSTEEN, a rare ingredient that will carry you to exotic jungles and sensory delights, all while benefiting your body with the finest nutrients for your immune system. Source Naturals searches the world for uncommon botanicals that enrich human lives. Explore uncharted seas of health with this powerful product.
